

```
v8::internal::wasm  
::StringBuilder::rewind  
_to_start
```

```
graph LR; A["v8::internal::wasm  
::StringBuilder::rewind  
_to_start"] --> B["v8::internal::wasm  
::StringBuilder::length"]
```

A diagram illustrating a sequence of two operations on a `v8::internal::wasm::StringBuilder` object. The first operation, shown in a gray box, is `rewind_to_start`. A blue arrow points from this box to a second white box, which contains the `length` property access. This visualizes the state of the builder after rewinding.

```
v8::internal::wasm  
::StringBuilder::length
```
