

v8::internal::OutBuffer
::EnsureCapacity

v8::internal::OutBuffer
::requires

v8::internal::OutBuffer
::SegmentFreeChars

```
graph LR; A[v8::internal::OutBuffer::EnsureCapacity] --> C[v8::internal::OutBuffer::SegmentFreeChars]; B[v8::internal::OutBuffer::requires] --> C;
```

The diagram illustrates a relationship between three V8 internal functions. On the left, two white rectangular boxes represent source functions: 'v8::internal::OutBuffer::EnsureCapacity' (top) and 'v8::internal::OutBuffer::requires' (bottom). On the right, a gray rectangular box represents the target function: 'v8::internal::OutBuffer::SegmentFreeChars'. Two blue arrows point from the source functions to the target function, indicating that both 'EnsureCapacity' and 'requires' depend on or call 'SegmentFreeChars'.
