

v8::internal::GetPtrCompr
CageBase

v8::internal::Internals
::ReadTaggedPointerField

v8::internal::GetPtrCompr
CageBaseFromOnHeapAddress

```
graph LR; A["v8::internal::GetPtrCompr  
CageBase"] --> C["v8::internal::GetPtrCompr  
CageBaseFromOnHeapAddress"]; B["v8::internal::Internals  
::ReadTaggedPointerField"] --> C;
```

The diagram illustrates a mapping or call relationship. On the left, two white rectangular boxes represent source functions: 'v8::internal::GetPtrCompr CageBase' (top) and 'v8::internal::Internals ::ReadTaggedPointerField' (bottom). On the right, a gray rectangular box represents the target function: 'v8::internal::GetPtrCompr CageBaseFromOnHeapAddress'. Two blue arrows point from the right side of each source box to the left side of the target box, indicating that both source functions call or map to the target function.
