

SaveCallSpeculationScope

DeoptFrameScope

v8::internal::maglev  
::MaglevGraphBuilder

```
graph BT; A["v8::internal::maglev  
::MaglevGraphBuilder"] --> B[SaveCallSpeculationScope]; A --> C[DeoptFrameScope];
```

The diagram illustrates a relationship where the `v8::internal::maglev::MaglevGraphBuilder` class (represented in a grey box) has arrows pointing to both the `SaveCallSpeculationScope` and `DeoptFrameScope` classes (represented in white boxes). This suggests that `MaglevGraphBuilder` is a base class or has a dependency on both of these scopes.
