

std::false\_type

```
classDiagram
    class v8_internal_is_union["v8::internal::is_union<Ts>"]
    class std_false_type["std::false_type"]
    v8_internal_is_union --|> std_false_type
```

The diagram illustrates an inheritance relationship. At the bottom is a class box for `v8::internal::is_union` with a template parameter `< Ts >`. It has three horizontal compartments, all of which are shaded gray. Above it is a class box for `std::false_type`, which also has three horizontal compartments, but only the top one is labeled. A blue arrow with an open triangular head points from the top compartment of the `v8::internal::is_union` box to the bottom of the `std::false_type` box, indicating that `std::false_type` inherits from `v8::internal::is_union`.

v8::internal::is\_union  
< Ts >
