

v8::internal::wasm  
::NativeModule::AddCode

v8::internal::wasm  
::NativeModule::AddCompiledCode

v8::internal::wasm  
::NativeModule::AddCodeWith  
CodeSpace

```
graph LR; A[v8::internal::wasm::NativeModule::AddCode] --> C[v8::internal::wasm::NativeModule::AddCodeWithCodeSpace]; B[v8::internal::wasm::NativeModule::AddCompiledCode] --> C;
```

The diagram illustrates a relationship between three V8 internal functions. On the left, two white rectangular boxes represent the functions `v8::internal::wasm::NativeModule::AddCode` (top) and `v8::internal::wasm::NativeModule::AddCompiledCode` (bottom). On the right, a gray rectangular box represents the function `v8::internal::wasm::NativeModule::AddCodeWithCodeSpace`. Two blue arrows point from the right side of the left boxes to the left side of the gray box, indicating that both `AddCode` and `AddCompiledCode` delegate or call `AddCodeWithCodeSpace`.
