

v8::internal::PreParserFactory
::NewOptionalChain

v8::internal::PreParserFactory
::NewProperty

v8::internal::PreParserExpression
::PrivateReference

```
graph LR; A[v8::internal::PreParserFactory::NewOptionalChain] --> C[v8::internal::PreParserExpression::PrivateReference]; B[v8::internal::PreParserFactory::NewProperty] --> C;
```

The diagram illustrates a relationship between two factory methods and a single expression class. On the left, two white rectangular boxes are stacked vertically. The top box contains the text 'v8::internal::PreParserFactory::NewOptionalChain' and the bottom box contains 'v8::internal::PreParserFactory::NewProperty'. On the right, a gray rectangular box contains the text 'v8::internal::PreParserExpression::PrivateReference'. Two blue arrows originate from the right side of the top and bottom white boxes and point towards the left side of the gray box, indicating that both factory methods are used to create instances of the 'v8::internal::PreParserExpression::PrivateReference' class.
