

std::true\_type

```
classDiagram
    class std_true_type["std::true_type"]
    class v8_internal_is_union["v8::internal::is_union<Union<Ts...>>"]
    v8_internal_is_union --|> std_true_type
```

The diagram illustrates an inheritance relationship. At the bottom is a class box for `v8::internal::is_union` with the template argument `< Union< Ts... > >`. This box is divided into three horizontal sections: the top section contains the class name and template arguments, while the two bottom sections are empty. Above this box is another class box for `std::true_type`, also divided into three horizontal sections. A blue arrow with an open triangular head points from the top section of the `v8::internal::is_union` box to the bottom section of the `std::true_type` box, indicating that `v8::internal::is_union` inherits from `std::true_type`.

v8::internal::is\_union  
< Union< Ts... > >
