

v8::internal::compiler  
::BytecodeGraphBuilder  
::GetConstructArgumentsFromRegister

```
graph LR; A["v8::internal::compiler  
::BytecodeGraphBuilder  
::GetConstructArgumentsFromRegister"] --> B["v8::internal::interpreter  
::Register::index"]
```

A diagram showing a call from a compiler module to an interpreter module. The left box, with a gray background, contains the text 'v8::internal::compiler', '::BytecodeGraphBuilder', and '::GetConstructArgumentsFromRegister'. A blue arrow points from the right side of this box to the left side of the right box. The right box, with a white background, contains the text 'v8::internal::interpreter' and '::Register::index'.

v8::internal::interpreter  
::Register::index
