graph LR; A["v8::internal::compiler::OperationTyper::AddRanger"] --> D["v8::internal::compiler::anonymous_namespace{operation-typer::cc}::array_max"]; B["v8::internal::compiler::OperationTyper::MultiplyRanger"] --> D; C["v8::internal::compiler::OperationTyper::SubtractRanger"] --> D;
```

The diagram illustrates a mapping from three source identifiers to a single target identifier. Three white rectangular boxes on the left, each containing a source identifier, have blue arrows pointing to a single gray rectangular box on the right containing the target identifier. The source identifiers are v8::internal::compiler::OperationTyper::AddRanger, v8::internal::compiler::OperationTyper::MultiplyRanger, and v8::internal::compiler::OperationTyper::SubtractRanger. The target identifier is v8::internal::compiler::anonymous\_namespace{operation-typer::cc}::array\_max.
