

v8::internal::IrRegExpData
::set_bytecode

v8::internal::IrRegExpData
::SetBytecodeForExperimental

v8::internal::IrRegExpData
::bytecode

```
graph LR; A["v8::internal::IrRegExpData::set_bytecode"] --> C["v8::internal::IrRegExpData::bytecode"]; B["v8::internal::IrRegExpData::SetBytecodeForExperimental"] --> C;
```

The diagram illustrates a mapping from two source functions to a target property. On the left, two white rectangular boxes represent the source functions: 'v8::internal::IrRegExpData::set_bytecode' (top) and 'v8::internal::IrRegExpData::SetBytecodeForExperimental' (bottom). On the right, a gray rectangular box represents the target property: 'v8::internal::IrRegExpData::bytecode'. Two blue arrows point from the right side of each source box to the left side of the target box, indicating that both source functions are associated with or point to the 'bytecode' property.
