

v8::internal::wasm
::DebugInfoImpl::GetStackDepth

v8::internal::wasm
::DebugInfoImpl::GetStackValue

v8::internal::wasm
::DebugSideTable::Entry
::stack_height

```
graph LR; A["v8::internal::wasm::DebugInfoImpl::GetStackDepth"] --> C["v8::internal::wasm::DebugSideTable::Entry::stack_height"]; B["v8::internal::wasm::DebugInfoImpl::GetStackValue"] --> C;
```

The diagram illustrates a mapping or transformation. On the left, two white rectangular boxes represent source functions: 'v8::internal::wasm::DebugInfoImpl::GetStackDepth' (top) and 'v8::internal::wasm::DebugInfoImpl::GetStackValue' (bottom). On the right, a gray rectangular box represents a target function: 'v8::internal::wasm::DebugSideTable::Entry::stack_height'. Two blue arrows point from the right side of each source box to the left side of the target box, indicating that both source functions are mapped to or transformed into the target function.
