

v8\_inspector::V8Debugger  
Script::setSource

v8\_inspector::V8Debugger  
Script::V8DebuggerScript

v8\_inspector::V8Debugger  
Script::Initialize

```
graph LR; A["v8_inspector::V8DebuggerScript::setSource"] --> C["v8_inspector::V8DebuggerScript::Initialize"]; B["v8_inspector::V8DebuggerScript::V8DebuggerScript"] --> C;
```

The diagram illustrates a relationship between three V8 Inspector functions. On the left, two white rectangular boxes represent source functions: 'v8\_inspector::V8DebuggerScript::setSource' (top) and 'v8\_inspector::V8DebuggerScript::V8DebuggerScript' (bottom). On the right, a gray rectangular box represents the target function: 'v8\_inspector::V8DebuggerScript::Initialize'. Two blue arrows point from the source functions to the target function, indicating that both 'setSource' and 'V8DebuggerScript' call or depend on 'Initialize'.
