

std::false_type

```
classDiagram
    class std_false_type["std::false_type"]
    class cppgc_internal_IsGarbageCollectedType["cppgc::internal::IsGarbageCollectedType< T, bool >"]
    cppgc_internal_IsGarbageCollectedType --|> std_false_type
```

The diagram illustrates an inheritance relationship. At the bottom is a class box for `cppgc::internal::IsGarbageCollectedType< T, bool >`, which is shaded gray and divided into three horizontal sections. Above it is a class box for `std::false_type`, which is white and also divided into three horizontal sections. A blue arrow with an open triangular head points from the top section of the lower class to the bottom section of the upper class, indicating that `cppgc::internal::IsGarbageCollectedType` inherits from `std::false_type`.

cppgc::internal::IsGarbage
CollectedType< T, bool >
