

v8::internal::DebugInfo
::GetBreakPoints

v8::internal::DebugInfo
::HasBreakPoint

v8::internal::DebugInfo
::GetBreakPointInfo

```
graph LR; A[v8::internal::DebugInfo::GetBreakPoints] --> C[v8::internal::DebugInfo::GetBreakPointInfo]; B[v8::internal::DebugInfo::HasBreakPoint] --> C;
```

The diagram illustrates a relationship between three V8 internal functions. On the left, two white rectangular boxes represent source functions: 'v8::internal::DebugInfo::GetBreakPoints' (top) and 'v8::internal::DebugInfo::HasBreakPoint' (bottom). On the right, a gray rectangular box represents the target function: 'v8::internal::DebugInfo::GetBreakPointInfo'. Two blue arrows point from the right side of each source box to the left side of the target box, indicating that both source functions call or utilize the target function.
