

std::false\_type

```
classDiagram
    class std_false_type["std::false_type"]
    class cppgc_internal_IsUntracedMemberType["cppgc::internal::IsUntracedMemberType< T, bool >"]
    cppgc_internal_IsUntracedMemberType --|> std_false_type
```

The diagram illustrates an inheritance relationship. At the bottom is a class box for `cppgc::internal::IsUntracedMemberType< T, bool >`, which is divided into three horizontal sections. The top section contains the class name, while the middle and bottom sections are empty. Above this box is a class box for `std::false_type`, also divided into three horizontal sections, with the class name in the top section and empty sections below. A blue arrow with an open triangular head points from the top section of the bottom box to the bottom section of the top box, indicating that `cppgc::internal::IsUntracedMemberType< T, bool >` inherits from `std::false_type`.

cppgc::internal::IsUntraced  
MemberType< T, bool >
