

v8::internal::ScopeInfo
::FunctionContextSlotIndex

v8::internal::ScopeInfo
::FunctionDebugName

v8::internal::ScopeInfo
::HasSharedFunctionName

v8::internal::ScopeInfo
::FunctionName

```
graph LR; A["v8::internal::ScopeInfo  
::FunctionContextSlotIndex"] --> D["v8::internal::ScopeInfo  
::FunctionName"]; B["v8::internal::ScopeInfo  
::FunctionDebugName"] --> D; C["v8::internal::ScopeInfo  
::HasSharedFunctionName"] --> D;
```

The diagram illustrates a mapping from three source fields to a single target field. Three white rectangular boxes on the left, each containing a v8::internal::ScopeInfo field name, have blue arrows pointing to a single gray rectangular box on the right. The target box also contains a v8::internal::ScopeInfo field name. The source fields are ::FunctionContextSlotIndex, ::FunctionDebugName, and ::HasSharedFunctionName. The target field is ::FunctionName.
