

std::false_type

```
classDiagram
    class std_false_type["std::false_type"]
    class cppgc_mixin["cppgc::internal::IsGarbageCollectedMixinType< T, bool, bool >"]
    cppgc_mixin --|> std_false_type
```

The diagram illustrates an inheritance relationship. At the top is a class box for `std::false_type`, which is divided into three horizontal sections. The top section contains the class name, while the middle and bottom sections are empty. Below this is a class box for `cppgc::internal::IsGarbageCollectedMixinType< T, bool, bool >`, also divided into three horizontal sections. The top section contains the class name, and the middle and bottom sections are empty. A blue arrow with an open triangular head points from the top section of the bottom class box to the bottom section of the top class box, indicating that `cppgc::internal::IsGarbageCollectedMixinType` inherits from `std::false_type`.

cppgc::internal::IsGarbage
CollectedMixinType< T,
bool, bool >
