

v8::internal::SwissNameDictionary
::EqualsForTesting

v8::internal::SwissNameDictionary
::Rehash

v8::internal::SwissNameDictionary
::EntryForEnumerationIndex

```
graph LR; A[v8::internal::SwissNameDictionary::EqualsForTesting] --> C[v8::internal::SwissNameDictionary::EntryForEnumerationIndex]; B[v8::internal::SwissNameDictionary::Rehash] --> C;
```

The diagram illustrates a relationship between three V8 internal functions. On the left, two white rectangular boxes represent source functions: 'v8::internal::SwissNameDictionary::EqualsForTesting' (top) and 'v8::internal::SwissNameDictionary::Rehash' (bottom). On the right, a gray rectangular box represents the target function: 'v8::internal::SwissNameDictionary::EntryForEnumerationIndex'. Two blue arrows point from the right side of each source box to the left side of the target box, indicating that both 'EqualsForTesting' and 'Rehash' are implemented or related to 'EntryForEnumerationIndex'.
