

v8::internal::Detachable  
Vector::push\_back

v8::internal::Detachable  
Vector::shrink\_to\_fit

v8::internal::Detachable  
Vector::Resize

```
graph LR; A["v8::internal::Detachable  
Vector::push_back"] --> C["v8::internal::Detachable  
Vector::Resize"]; B["v8::internal::Detachable  
Vector::shrink_to_fit"] --> C;
```

The diagram illustrates a relationship between three V8 internal functions. On the left, two white rectangular boxes represent source functions: 'v8::internal::Detachable Vector::push\_back' (top) and 'v8::internal::Detachable Vector::shrink\_to\_fit' (bottom). On the right, a gray rectangular box represents the target function: 'v8::internal::Detachable Vector::Resize'. Two blue arrows point from the right side of each source box to the left side of the target box, indicating that both 'push\_back' and 'shrink\_to\_fit' rely on or call the 'Resize' function.
