

v8::internal::Instruction
::RdMode

v8::internal::Instruction
::RnMode

v8::internal::Instruction
::IsAddSubImmediate

```
graph LR; A[v8::internal::Instruction::RdMode] --> C[v8::internal::Instruction::IsAddSubImmediate]; B[v8::internal::Instruction::RnMode] --> C;
```

The diagram illustrates a relationship between three V8 instruction modes. On the left, there are two white rectangular boxes. The top box is labeled 'v8::internal::Instruction::RdMode' and the bottom box is labeled 'v8::internal::Instruction::RnMode'. On the right, there is a gray rectangular box labeled 'v8::internal::Instruction::IsAddSubImmediate'. Two blue arrows point from the right side of the left boxes to the left side of the gray box, indicating that both 'RdMode' and 'RnMode' are specialized or related to the 'IsAddSubImmediate' mode.
