

v8_inspector::V8RuntimeAgent
Impl::disable

v8_inspector::V8RuntimeAgent
Impl::restore

v8_inspector::V8RuntimeAgent
Impl::setCustomObjectFormatterEnabled

v8_inspector::V8Inspector
SessionImpl::setCustomObjectFormatter
Enabled

```
graph LR; A[v8_inspector::V8RuntimeAgent Impl::disable] --> D[v8_inspector::V8Inspector SessionImpl::setCustomObjectFormatter Enabled]; B[v8_inspector::V8RuntimeAgent Impl::restore] --> D; C[v8_inspector::V8RuntimeAgent Impl::setCustomObjectFormatterEnabled] --> D;
```

The diagram illustrates a sequence of method calls. On the left, three white rectangular boxes represent methods from the `v8_inspector::V8RuntimeAgent` class: `Impl::disable`, `Impl::restore`, and `Impl::setCustomObjectFormatterEnabled`. Blue arrows point from each of these three boxes to a single, larger gray rectangular box on the right. This gray box represents a method from the `v8_inspector::V8Inspector` class, specifically `SessionImpl::setCustomObjectFormatterEnabled`. The gray box is shaded light gray and has a black border, while the other boxes are white with black borders.
