

v8::internal::ScopeIterator  
::Restart

v8::internal::ScopeIterator  
::ScopeIterator

v8::internal::FrameInspector  
::GetContext

```
graph LR; A[v8::internal::ScopeIterator::Restart] --> C[v8::internal::FrameInspector::GetContext]; B[v8::internal::ScopeIterator::ScopeIterator] --> C;
```

The diagram illustrates two calls to the `v8::internal::FrameInspector::GetContext` method. On the left, two white rectangular boxes represent the calling methods: `v8::internal::ScopeIterator::Restart` (top) and `v8::internal::ScopeIterator::ScopeIterator` (bottom). Blue arrows point from each of these boxes to a single gray rectangular box on the right, which represents the target method `v8::internal::FrameInspector::GetContext`.
