

```
heap::base::anonymous  
_namespace{stack::cc}  
::IteratePointersInUnsafeStack  
IfNecessary
```

A diagram showing a call from an anonymous namespace to a visitor interface. On the left, a gray box contains the code for an anonymous namespace in the heap::base namespace, which calls IteratePointersInUnsafeStackIfNecessary. A blue arrow points from this box to a white box on the right, which contains the definition of the StackVisitor::VisitPointer interface.

```
heap::base::StackVisitor  
::VisitPointer
```
