

std::true_type

```
classDiagram
    class std_true_type["std::true_type"]
    class v8_internal_detail_is_simple_subtype["v8::internal::detail::is_simple_subtype<FieldType, Object>"]
    v8_internal_detail_is_simple_subtype --|> std_true_type
```

The diagram shows a class hierarchy. At the top is a class box for 'std::true_type' with two empty compartments. Below it is a class box for 'v8::internal::detail::is_simple_subtype<FieldType, Object>' with three compartments, all of which are shaded gray. A blue arrow with an open triangular head points from the top of the lower box to the bottom of the upper box, indicating inheritance.

v8::internal::detail
::is_simple_subtype<
FieldType, Object >
