

std::true_type

```
classDiagram
    class std_true_type["std::true_type"]
    class cppgc_internal_IsMemberType["cppgc::internal::IsMemberType< T, true >"]
    cppgc_internal_IsMemberType --|> std_true_type
```

The diagram illustrates an inheritance relationship. At the top is a class box for `std::true_type`, which is divided into three horizontal sections: the top section contains the class name, and the two bottom sections are empty. Below this is a class box for `cppgc::internal::IsMemberType< T, true >`, which is also divided into three horizontal sections: the top section contains the class name, and the two bottom sections are shaded gray. A blue arrow with an open triangular head points from the top section of the bottom class box to the bottom section of the top class box, indicating that `cppgc::internal::IsMemberType< T, true >` inherits from `std::true_type`.

cppgc::internal::IsMember
Type< T, true >
