

v8::internal::JSTypedArray
::GetLength

v8::internal::JSTypedArray
::IsOutOfBounds

v8::internal::JSTypedArray
::GetLengthOrOutOfBounds

```
graph LR; A[v8::internal::JSTypedArray::GetLength] --> C[v8::internal::JSTypedArray::GetLengthOrOutOfBounds]; B[v8::internal::JSTypedArray::IsOutOfBounds] --> C;
```

The diagram illustrates a function delegation or inheritance relationship. On the left, two white rectangular boxes represent source functions: 'v8::internal::JSTypedArray::GetLength' (top) and 'v8::internal::JSTypedArray::IsOutOfBounds' (bottom). On the right, a gray rectangular box represents the target function: 'v8::internal::JSTypedArray::GetLengthOrOutOfBounds'. Two blue arrows point from the right side of each source box to the left side of the target box, indicating that both 'GetLength' and 'IsOutOfBounds' delegate their logic to 'GetLengthOrOutOfBounds'.
