

v8::internal::CppGraphBuilder  
Impl::AddEdge

v8::internal::CppGraphBuilder  
Impl::AddRootEdge

v8::internal::EmbedderNode  
::InternalizeEdgeName

```
graph LR; A[v8::internal::CppGraphBuilderImpl::AddEdge] --> C[v8::internal::EmbedderNode::InternalizeEdgeName]; B[v8::internal::CppGraphBuilderImpl::AddRootEdge] --> C;
```

The diagram illustrates a dependency or call relationship. On the left, two white rectangular boxes represent source functions: 'v8::internal::CppGraphBuilder Impl::AddEdge' (top) and 'v8::internal::CppGraphBuilder Impl::AddRootEdge' (bottom). On the right, a gray rectangular box represents the target function: 'v8::internal::EmbedderNode::InternalizeEdgeName'. Two blue arrows point from the right side of each source box to the left side of the target box, indicating that both source functions call or depend on the target function.
