

std::false\_type

```
classDiagram
    class std_false_type["std::false_type"]
    class cppgc_mixin["cppgc::internal::HasGarbageCollectedMixinTypeMarker < T, typename >"]
    std_false_type <|-- cppgc_mixin
```

The diagram illustrates an inheritance relationship. At the top is a class box for `std::false_type`, which is divided into three horizontal sections. The top section contains the class name, while the middle and bottom sections are empty. Below this is a class box for `cppgc::internal::HasGarbageCollectedMixinTypeMarker < T, typename >`, which is divided into three horizontal sections. The top section contains the class name, and the middle and bottom sections are shaded gray. A blue arrow with an open triangular head points from the top section of the bottom class box to the bottom section of the top class box, indicating that `cppgc::internal::HasGarbageCollectedMixinTypeMarker` inherits from `std::false_type`.

cppgc::internal::HasGarbage  
CollectedMixinTypeMarker  
< T, typename >
