

v8::internal::compiler
::turbohaft::Graph::Add

v8::internal::compiler
::turbohaft::Graph::Replace

v8::internal::compiler
::turbohaft::Graph::Increment
InputUses

```
graph LR; A["v8::internal::compiler  
::turbohaft::Graph::Add"] --> C["v8::internal::compiler  
::turbohaft::Graph::Increment  
InputUses"]; B["v8::internal::compiler  
::turbohaft::Graph::Replace"] --> C;
```

The diagram illustrates a relationship between three V8 compiler functions. On the left, two white rectangular boxes represent source functions: 'v8::internal::compiler::turbohaft::Graph::Add' (top) and 'v8::internal::compiler::turbohaft::Graph::Replace' (bottom). On the right, a gray rectangular box represents the target function: 'v8::internal::compiler::turbohaft::Graph::IncrementInputUses'. Two blue arrows point from the source functions to the target function, indicating that both 'Add' and 'Replace' methods call or utilize 'IncrementInputUses'.
