

TorqueGeneratedTurboshaft  
Word32Type

```
graph BT; A["v8::internal::TurboshaftWord32Type< TurboshaftWord32Type, TurboshaftType >"] --> B["TorqueGeneratedTurboshaftWord32Type"]
```

The diagram illustrates an inheritance relationship. At the bottom is a box representing the base class `v8::internal::TurboshaftWord32Type< TurboshaftWord32Type, TurboshaftType >`. It is divided into three horizontal sections: the top section contains the class name, and the bottom two sections are empty. Above this box is another box representing the derived class `TorqueGeneratedTurboshaftWord32Type`. It is also divided into three horizontal sections: the top section contains the class name, and the bottom two sections are shaded gray. A blue arrow with an open triangular head points from the top section of the base class box to the bottom section of the derived class box, indicating that the derived class inherits from the base class.
