

v8::internal::IsolateSafepoint  
::InitiateGlobalSafepointScope

v8::internal::IsolateSafepoint  
::TryInitiateGlobalSafepointScope

v8::internal::IsolateSafepoint  
::InitiateGlobalSafepointScopeRaw

```
graph LR; A[v8::internal::IsolateSafepoint::InitiateGlobalSafepointScope] --> C[v8::internal::IsolateSafepoint::InitiateGlobalSafepointScopeRaw]; B[v8::internal::IsolateSafepoint::TryInitiateGlobalSafepointScope] --> C;
```

The diagram illustrates a relationship between three V8 internal functions. On the left, two white rectangular boxes represent source functions: 'v8::internal::IsolateSafepoint::InitiateGlobalSafepointScope' (top) and 'v8::internal::IsolateSafepoint::TryInitiateGlobalSafepointScope' (bottom). On the right, a gray rectangular box represents the target function: 'v8::internal::IsolateSafepoint::InitiateGlobalSafepointScopeRaw'. Two blue arrows point from the source functions to the target function, indicating that both source functions call or delegate to the target function.
