

v8::internal::CodeStubAssembler
::ChangeTaggedNonSmiToInt32

v8::internal::CodeStubAssembler
::NumberToMathClz32

v8::internal::CodeStubAssembler
::TruncateNumberToWord32

```
graph LR; A["v8::internal::CodeStubAssembler::ChangeTaggedNonSmiToInt32"] --> C["v8::internal::CodeStubAssembler::TruncateNumberToWord32"]; B["v8::internal::CodeStubAssembler::NumberToMathClz32"] --> C;
```

The diagram illustrates a function call or dispatch mechanism. On the left, two white rectangular boxes represent source functions: 'v8::internal::CodeStubAssembler::ChangeTaggedNonSmiToInt32' (top) and 'v8::internal::CodeStubAssembler::NumberToMathClz32' (bottom). On the right, a gray rectangular box represents the target function: 'v8::internal::CodeStubAssembler::TruncateNumberToWord32'. Two blue arrows originate from the right side of the left boxes and point towards the left side of the gray box, indicating that both source functions call or dispatch to the target function.
