

std::true\_type

```
graph BT; A["v8::internal::detail::is_simple_subtype<Smi, MaybeWeak<Object>>"] --> B["std::true_type"]
```

The diagram illustrates an inheritance relationship. At the bottom is a gray-shaded box representing the base class `v8::internal::detail::is_simple_subtype<Smi, MaybeWeak<Object>>`. It has three horizontal sections, with the top one containing the class name. Above it is a white box representing the derived class `std::true_type`. It also has three horizontal sections, with the top one containing the class name. A blue arrow with a hollow triangular head points from the top section of the gray box to the bottom section of the white box, indicating that `std::true_type` inherits from `v8::internal::detail::is_simple_subtype<Smi, MaybeWeak<Object>>`.
