

v8::internal::PerfettoLogger
::BytecodeMoveEvent

v8::internal::PerfettoLogger
::CodeMoveEvent

v8::internal::CodeTraceContext
::set_code_move

```
graph LR; A[v8::internal::PerfettoLogger::BytecodeMoveEvent] --> C[v8::internal::CodeTraceContext::set_code_move]; B[v8::internal::PerfettoLogger::CodeMoveEvent] --> C;
```

The diagram illustrates a mapping from two event types to a single context method. On the left, two white rectangular boxes are stacked vertically. The top box contains the text 'v8::internal::PerfettoLogger::BytecodeMoveEvent' and the bottom box contains 'v8::internal::PerfettoLogger::CodeMoveEvent'. On the right, a gray rectangular box contains the text 'v8::internal::CodeTraceContext::set_code_move'. Two blue arrows originate from the right side of the left boxes and point towards the left side of the gray box, indicating that both event types are associated with or mapped to the 'set_code_move' method.
