

std::true\_type

```
graph BT; A["v8::internal::detail::IsRegisterArray< EmptyRegisterArray >"] --> B["std::true_type"]
```

The diagram illustrates an inheritance relationship. At the bottom is a large gray rectangle representing the base class `v8::internal::detail::IsRegisterArray< EmptyRegisterArray >`. It is divided into three horizontal sections, with the top section containing the class name. Above this rectangle is a smaller white rectangle representing the derived class `std::true_type`, also divided into three horizontal sections. A blue arrow points from the top center of the gray rectangle to the bottom center of the white rectangle, indicating that `std::true_type` inherits from `v8::internal::detail::IsRegisterArray< EmptyRegisterArray >`.
