

v8::internal::RegExpDisjunction  
::CaptureRegisters

v8::internal::RegExpAlternative  
::CaptureRegisters

v8::internal::anonymous  
\_namespace{regexp-ast  
::cc}::ListCaptureRegisters

```
graph LR; A[v8::internal::RegExpDisjunction::CaptureRegisters] --> C[v8::internal::anonymous_namespace{regexp-ast::cc}::ListCaptureRegisters]; B[v8::internal::RegExpAlternative::CaptureRegisters] --> C;
```

The diagram illustrates a mapping from two V8 internal classes to a common function. On the left, there are two white rectangular boxes. The top box contains the text 'v8::internal::RegExpDisjunction::CaptureRegisters'. The bottom box contains the text 'v8::internal::RegExpAlternative::CaptureRegisters'. On the right, there is a single gray rectangular box containing the text 'v8::internal::anonymous\_namespace{regexp-ast::cc}::ListCaptureRegisters'. Two blue arrows originate from the right side of the two boxes on the left and point towards the left side of the gray box on the right, indicating that both 'v8::internal::RegExpDisjunction::CaptureRegisters' and 'v8::internal::RegExpAlternative::CaptureRegisters' are mapped to or implemented by 'v8::internal::anonymous\_namespace{regexp-ast::cc}::ListCaptureRegisters'.
