

std::false_type

```
classDiagram
    class std_false_type["std::false_type"]
    class cppgc_internal_IsTraceMethodConst["cppgc::internal::IsTraceMethodConst< T, typename >"]
    cppgc_internal_IsTraceMethodConst --|> std_false_type
```

The diagram illustrates an inheritance relationship. At the top is a class box for `std::false_type`, which is divided into three horizontal sections: the top section contains the class name, and the two bottom sections are empty. Below it is a class box for `cppgc::internal::IsTraceMethodConst< T, typename >`, which is divided into three horizontal sections: the top section contains the class name, and the two bottom sections are shaded gray. A blue arrow with an open triangular head points from the top section of the bottom class box to the bottom section of the top class box, indicating that `cppgc::internal::IsTraceMethodConst` inherits from `std::false_type`.

cppgc::internal::IsTrace
MethodConst< T, typename >
