

std::true_type

```
classDiagram
    class std_true_type["std::true_type"]
    class cppgc_internal_IsWeakMemberType["cppgc::internal::IsWeakMemberType< T, true >"]
    cppgc_internal_IsWeakMemberType --|> std_true_type
```

The diagram illustrates an inheritance relationship. At the bottom is a class box for `cppgc::internal::IsWeakMemberType< T, true >`, which is shaded gray and divided into three horizontal sections. Above it is a class box for `std::true_type`, which is white and also divided into three horizontal sections. A blue arrow with an open triangular head points from the top section of the lower class to the bottom section of the upper class, indicating that `cppgc::internal::IsWeakMemberType< T, true >` inherits from `std::true_type`.

cppgc::internal::IsWeakMember
Type< T, true >
