

v8::internal::V8FileLogger  
::CodeCreateEvent

v8::internal::V8FileLogger  
::RegExpCodeCreateEvent

v8::internal::anonymous  
\_namespace{log::cc}::AppendCode  
CreateHeader

```
graph LR; A["v8::internal::V8FileLogger::CodeCreateEvent"] --> C["v8::internal::anonymous_namespace{log::cc}::AppendCodeCreateHeader"]; B["v8::internal::V8FileLogger::RegExpCodeCreateEvent"] --> C;
```

The diagram illustrates a mapping from two source functions to a single target function. On the left, two white rectangular boxes represent the source functions: 'v8::internal::V8FileLogger::CodeCreateEvent' (top) and 'v8::internal::V8FileLogger::RegExpCodeCreateEvent' (bottom). On the right, a larger grey rectangular box represents the target function: 'v8::internal::anonymous\_namespace{log::cc}::AppendCodeCreateHeader'. Two blue arrows point from the right side of each source box to the left side of the target box, indicating that both source functions are mapped to or implemented by the target function.
