

std::true\_type

```
classDiagram
    class std_true_type["std::true_type"]
    class cppgc_internal_lsWeak["cppgc::internal::lsWeak< BasicMember< T, WeakMember Tag, WriteBarrierPolicy, CheckingPolicy, StorageType > >"]
    std_true_type <|-- cppgc_internal_lsWeak
```

The diagram illustrates an inheritance relationship. At the top is a class box for `std::true_type`, which is divided into three horizontal sections. The top section contains the class name, while the middle and bottom sections are empty. Below this box is a class box for `cppgc::internal::lsWeak`, which is divided into three horizontal sections. The top section contains the full class name template, while the middle and bottom sections are empty. A blue arrow with an open triangular head points from the bottom of the `cppgc::internal::lsWeak` box to the bottom of the `std::true_type` box, indicating that `cppgc::internal::lsWeak` inherits from `std::true_type`.

cppgc::internal::lsWeak  
< BasicMember< T, WeakMember  
Tag, WriteBarrierPolicy, CheckingPolicy,  
StorageType > >
