

v8::internal::wasm
::liftoff::EmitSimdShift

v8::internal::wasm
::liftoff::EmitSimdShiftImmediate

v8::internal::wasm
::liftoff::MaskFromNeonDataType

```
graph LR; A["v8::internal::wasm  
::liftoff::EmitSimdShift"] --> C["v8::internal::wasm  
::liftoff::MaskFromNeonDataType"]; B["v8::internal::wasm  
::liftoff::EmitSimdShiftImmediate"] --> C;
```

The diagram illustrates a mapping or call relationship. Two source functions, 'v8::internal::wasm::liftoff::EmitSimdShift' and 'v8::internal::wasm::liftoff::EmitSimdShiftImmediate', are shown on the left. Arrows from both point to a single target function, 'v8::internal::wasm::liftoff::MaskFromNeonDataType', on the right. The target function box is shaded gray, while the source boxes are white.
